

INFOE 3: LAB 3_Suppression
Joy Melisa S. Segotier
Jorlyn Shane M. Claveria
Maria Theresa N. Reyes
BS INFO 3C

The screenshot shows a Visual Studio Code editor with a file named `employee_data.csv` open. The file contains a list of employee records with columns: `name`, `age`, `zip_code`, `salary`, and `medical_risk`. The records are as follows:

name	age	zip_code	salary	medical_risk
Brian Jones	80	50131	44162	Low
Elizabeth Perez	66	09495	64680	Low
Nicole Gonzalez	34	46683	127257	Low
Gina Walters	58	68955	48854	High
Jessica King	40	71679	145586	Medium
Sonya Chavez	48	56174	49782	High
Matthew Perez	71	19555	47489	Medium
Christine Yates	46	61998	140435	High
Nicole Dickerson	52	16437	43551	Medium
Ian Gibbs	55	43863	67417	Low
John Gibson	63	42764	61058	Medium
Morgan Harmon	61	66454	144420	Low
Mindy Kelly	84	34488	109039	High
Regina Li MD	39	04403	111798	Medium
Kevin Brown	25	81152	152292	Medium
Stephen Williams	76	57644	125019	High
Maria Ayers	61	98371	110818	Low
James Smith	42	80843	124444	High
Leslie Martinez	26	64064	93149	Low
Amber Smith	56	62968	40721	Low
Sharon Payne	82	17059	123625	High
Norman Hunter	34	36957	159664	Medium
John Brown	46	45445	36523	Low
Angela Webb	54	88490	113259	High
Alvin Gordon	18	64572	133273	Low

Initial Data:

Shows the original `employee_data.csv` file before any privacy cleaning. It shows all 5 columns: `name`, `age`, `zip_code`, `salary`, and `medical_risk`. This confirms the presence of direct identifiers `name` and `medical_risk` that need to be removed.

The screenshot shows a Visual Studio Code editor with a file named `lab3.py` open. The script reads the `employee_data.csv` file and processes it to remove direct identifiers. The code is as follows:

```
1 import copy
2 import csv
3
4 raw_data = []
5
6 with open('employee_data.csv', 'r', encoding='utf-8-sig') as file:
7     reader = csv.DictReader(file)
8     for row in reader:
9         row['salary'] = int(row['salary'])
10        raw_data.append(row)
11
12
13 cleaned_data = copy.deepcopy(raw_data)
14
15 hit_list = ["name", "medical_risk"]
16
17
18 for record in cleaned_data:
19     for key in hit_list:
20         record.pop(key, None)
21
22 print("")
23 for key, value in cleaned_data[0].items():
24     print(f"    {key}: {value}")
25 print("")
```

The terminal output shows the following:

```
Warning: PowerShell detected that you might be using a screen reader and has disabled PSReadLine for compatibility purposes. If you want to re-enable it, run 'Import-Module P
SReadLine'.

PS C:\Users\HYUN GADGETS\Desktop\Segotier, Claveria, Reyes_BSINFO3C_Lab3_Info3> & "C:\Users\HYUN GADGETS\AppData\Local\Programs\Python\Python314\python.exe" "c:\Users\HYUN G
ADGETS\Desktop\Segotier, Claveria, Reyes_BSINFO3C_Lab3_Info3\lab3.py"
{
  age: 80
  zip_code: 50131
  salary: 44162
}
```

The terminal also shows a success message: "Success! Final CSV has been saved!"

Output:

The terminal displays a cleaned record in the format {'age': '22', 'zip_code': '07245', 'salary': 82382}, confirming that only the required three columns remain and the program executed without crashing.

The screenshot shows a VS Code editor window with the following components:

- EXPLORER:** Lists files including `lab3.py`, `cleaned_employee_data.csv`, and `employee_data.csv`.
- EDITOR:** Displays the content of `cleaned_employee_data.csv`, which contains a single header row and 25 data rows, each with three comma-separated values representing age, zip_code, and salary.
- TERMINAL:** Shows the execution of a PowerShell command to run `lab3.py`. The output displays a JSON object for the first record: `{ 'age': 80, 'zip_code': 50131, 'salary': 44162 }`. A success message at the bottom states: "Success! Final CSV has been saved!".

```
Warning: PowerShell detected that you might be using a screen reader and has disabled PSReadLine for compatibility purposes. If you want to re-enable it, run 'Import-Module P
SReadLine'.

PS C:\Users\HYUN GADGETS\Desktop\Segotier, Claveria, Reyes_BSINFO3C_Lab3_Info3> & "C:/Users/HYUN GADGETS/AppData/Local/Programs/Python/Python314/python.exe" "c:/Users/HYUN G
ADGETS/Desktop/Segotier, Claveria, Reyes_BSINFO3C_Lab3_Info3/lab3.py"
{
  age: 80
  zip_code: 50131
  salary: 44162
}

Success! Final CSV has been saved!
```

Final CSV:

Showing the final cleaned CSV file (`cleaned_employee_data.csv`) opened in the editor. It verifies that the exported file contains exactly 3 columns (`age`, `zip_code`, `salary`) and no traces of `name` or `medical_risk`, satisfying the suppression and export requirements.
