PS C:\Users\Daisy Mae Barion\Downloads\INFOE 3 LAB ACTIVITY> python lab3_suppression.py
Verification - Cleaned Record: {'age': 69, 'zip_code': '12518', 'salary': 41597}

Success: 'lab3_cleaned_data.csv' has been created.

PS C:\Users\Daisy Mae Barion\Downloads\INFOE 3 LAB ACTIVITY> |

The final CSV file has exactly 3 columns instead of 5.

```
lab3_cleaned_data.csv
1 age,zip_code,salary
2 69,12518,41597

Short Description:

We performed data suppression by creating a copy of the raw dataset using `copy.deepcopy()`. We then used a nested loop and a 'hit list' to identify and remove the name and medical_risk fields using the `.pop()` method to ensure script stability. Finally, we exported the cleaned 3-column dataset to a CSV file for public research use.
